ASBV Trait Definitions

PWT: Body Weight -kg-Measured at 7-8 months of age, rams with a higher figure will mature earlier

YWT: Body Weight -kg-Rams with more positive WT ASBVs produce progeny that grow quicker and are heavier at a certain age.

YFAT: Fat Depth (mm) - Rams with more negative FAT ASBVs produce progeny that are leaner

YEMD: Eye Muscle Depth (mm) -Rams with more positive ASBVs for EMD will produce progeny that have more muscle, independent of weight, and a higher lean meat yield

YCFW: Clean Fleece Weight (%) -Rams with higher CFW ASBVs produce progeny which will cut more wool.

YFD: Fibre Diameter (μm) -Rams with more negative FD ASBVs produce progeny which are finer.

SMHR: Sustainable Merino High Rainfall index. It estimates the genetic difference between animals against a production system that focuses on meat production, wool production reproduction and growth, with an additional emphasis on animal welfare traits such as wrinkle, worm egg count and dag in a self-replacing merino flock. This index will phase out and replace the DP+ in the next 18 months.

DP: The DP index is calculated using the traits most recorded by MERINOSELECT of Fleece Weight, Fibre Diameter, Body Weight and CV, plus eye muscle depth and weaning rate. These indexes are aimed at those producers whose majority of sheep income comes from sheep sales. It is for self-replacing merino flocks that do not keep their wethers and also join a portion of their ewes to terminal sires for lamb production.
